

## CS 4223 Project Checkpoint #5

Due October 20

### Assignment

Add semantic code to your Slic parser to build a symbol table. Let the main program write the content of the symbol table to the screen after parsing is completed. The output should be neat, well labeled, and easy to read. Include a *makefile* that builds your entire application.

### What to Turn In

Zip all your source code files, including the *makefile*, and turn them in via Blackboard by class time on the due date. Also, turn in a hardcopies of your code, but not the scanner and not the *makefile*.
